BHUMIT SHETH

Phoenix, AZ (open to relocate) | (623) 212-3389 | contact.bhumit@gmail.com | linkedin.com/in/bhumitsheth | github.com/shethbhumit

Data professional on a consumer fintech's data engineering & analytics team, building the analytics foundation: **datamarts** and **master tables** as a single source of truth, governed **dim/fact models**, tested **Airflow DAGs** shipped through **CI/CD**, and **semantic layers** for self-service. Uses **Claude Code daily** and designs models and documentation that both analysts and **LLM agents** can rely on.

PROFESSIONAL EXPERIENCE

Data Analyst II – Data Engineering & Analytics **Feb 2026 – Present**
Upgrade Inc. (consumer fintech: lending, cards & banking) *Phoenix, AZ*

- Built the contact-center **datamart** as the **single source of truth** for operations metrics, designing Airflow-orchestrated **master tables** for every **Genesys** conversation, **Sedric.AI** QA evaluation (with confidence-score validation and eligibility logic), and **CSAT** survey on top of Data Engineering's source tables, with **incremental loads** on key tables.
- Turned the Operations team's metric definitions into governed SQL logic (CTEs, window functions) on the master tables, applying **master data management** practices so dashboards and scorecards all report the same numbers.
- Delivered the **Contact Center Scorecard** for **1,000+ employees**, improving reporting accuracy **20%** and processing speed **70%**, by engineering **DAGs** that turn 50+ KPIs from the master tables into KPI events, goals, and scores published to **dim/fact tables**, with **tests shipped through the team's CI/CD pipeline**.
- Enabled **7 analysts** to **self-serve** metric definitions and analysis through AI by building a **Claude data plugin** (skills, agents, context) on the company llm-context repo so models and documentation work for **both analysts and LLM users**.
- Built a SQL **data-lineage** layer from the Tableau Metadata API to inform BI rationalization, and automated bankruptcy-notice processing with Python, SQL, and the Gmail API, saving **60+ hours per month**.

Data Analyst I – Data Engineering & Analytics **Jul 2024 – Jan 2026**
Upgrade Inc. *Phoenix, AZ*

- Built Python/SQL pipelines (incl. JIRA API) integrating external and operational data into **Redshift**, feeding a unified **semantic layer** and **dimensional models** behind Tableau dashboards for leadership self-service.
- Sped up SQL/Python development and code review while keeping metric logic consistent across **3 projects**, by using **Claude Code daily** as the team's AI Champion and building a **validation framework** (prompt templates, guardrails, reconciliation tests, review checklists) that catches edge cases before they reach stakeholders.
- Wrote **technical documentation** (data-model specs, metric definitions, runbooks) and turned business needs into specs with acceptance criteria, validated via reconciliation tests.
- Built SARIMA and Cox regression models for capacity planning and retention decisions, and automated recurring workflows with Python/SQL/APIs, saving **60+ hours per month**.

Drilling Engineer / Analyst **Oct 2020 – Jul 2023**
Cairn Oil and Gas *India*

- Leveraged SQL and Python to **analyze operational data**, enabling a predictive maintenance and optimization framework that **cut costs by over $3M**.
- Created Tableau dashboards tracking asset-level KPIs and benchmarks across the upstream portfolio, driving a **10% gain in operational efficiency**.

PROJECTS

Healthcare Medallion Pipeline – Databricks Delta Live Tables GitHub

- Built a bronze → silver → gold pipeline on **Databricks** with **Delta Live Tables** and Delta Lake, using streaming tables for **incremental ingestion**, declarative **data quality expectations** to drop invalid rows, and gold aggregate tables as reporting metrics.

Trade KPI Analytics – Snowflake Dynamic Tables GitHub

- Modeled trade data in a **medallion architecture** with Snowflake **Dynamic Tables** (incremental refresh) and scheduled tasks, publishing gold-layer trader, instrument, and strategy **KPI tables** for reporting.

Car Rental Warehouse – SCD2 in Snowflake + Airflow GitHub

- Designed SCD2 dimension and fact tables with **MERGE-based incremental upserts** orchestrated in **Airflow**, surrogate keys for point-in-time history, and null/PK/FK **data quality checks**.

SKILLS

Modeling & Transformation: SQL (CTEs, window functions), dimensional modeling (dim/fact, SCD2), medallion architecture, incremental loads (MERGE/upsert), data quality testing, dbt
Platforms & Orchestration: Databricks (Delta Live Tables, Delta Lake), Snowflake (Dynamic Tables), Redshift, PostgreSQL, Apache Airflow
Engineering & AI: Python, PySpark, Git/GitHub, CI/CD, Claude Code (daily), Augment
BI & Analytics: Tableau, semantic layers, Excel (Advanced), A/B testing, time series (SARIMA), regression, scikit-learn

EDUCATION

M.S. Business Analytics (GPA 4.0) – Arizona State University, W. P. Carey School of Business, Tempe, AZ **May 2024**
B.Tech. Petroleum Engineering – Indian Institute of Technology (ISM), Dhanbad, India **Jul 2020**
